

# System Access Controls

CITY OF HENDERSON

## 2-FACTOR AUTHENTICATION

- The City of Henderson strengthened its access controls this year by implementing 2-Factor Authentication for all remote access.
- Each remote user (900+) is required to provide something they know and something they have to remotely access City systems. Something they know is their password. Something they have is an access token that is either generated by a key fob, mobile application or delivered via a text message.
