A PLACE TO CALL HOME

# City of Henderson Open Data Annual Report 2021

## Executive Summary

The City of Henderson is committed to an open, transparent, and accessible government. By improving access to data, the city seeks to develop opportunities for economic development and increased civic participation for citizens. Information technologies, including robust web-based open data platforms, are essential for open and good government. The protection of public safety, lawful privacy, confidentiality, intellectual property, and security interests will be maintained as a paramount priority.

### PROGRESS TOWARD STATED PROGRAM GOALS:

- 1. Establish a framework for the quality, storage, and use of data**  
Additional procedural documents were developed. The Open Data Program Approval Process delineates the procedure for departmental asset publication approval requests. The Gateway Request Data Verification Self-Audit addresses data quality and verification measures.
- 2. Establish an open data platform**  
The Open Data Platform officially launched in March of 2021. Internal data automatically populates the external site for immediate public consumption. This expedites the accessibility of governmental information allowing for the added value of a minimized transparency link.
- 3. Establish data management roles and responsibilities**  
Additional role responsibilities, such as data verification through backup and redundant checks for confidential and sensitive information, were set in both the Open Data Program Approval Process and Gateway Request Data Verification Self-Audit documents.
- 4. Engage City staff in data architecture building**  
Integration of the Socrata Gateway with the City's internal systems has been completed, and data transfer testing is underway.
- 5. Establish procedures that facilitate data sharing and increase the accessibility of data between departments**  
Training is held regularly on the use of our internal data management systems, as is supplemental training on the asset approval process and gateway use requests. Designated City staff engages City departments to discover and develop publishable data, automate processing tools, publish training documentation, and establish metrics.

## Background

In 2015, the city began working with Socrata to pilot and implement a specialized and innovative project expansion to the internal performance data management system. The purpose of the endeavor was to fulfill the City's commitment to open, transparent, and accessible government, improve decision-making, promote innovation, increase efficiencies among departments, partner organizations, and citizens, and better allocate resources.

This pilot publicly launched five datasets: Parks & Trails, Business Licensing, Building Permits, Crime, and Demographics information that demonstrated the value of Open Data practices and tested the viability of Socrata as the City's Open Data Platform. This experience also yielded valuable data insights and provided the basis for training both City and Socrata staff. Coupling the proven potential of Open Data with insightful best practices, the City has continuously sought to improve its Open Data offerings.

To solidify this progress, the City Council approved and adopted an Open Data policy. Approved August 6, 2019, Resolution No. 4355 demonstrated public commitment to lasting change and established formal governance processes to institutionalize sustainable public data-sharing. The focus of the first year was to provide the foundational cornerstones for program implementation. Because the COVID-19 pandemic significantly hindered goal progression in 2020, the goals were held over for 2021:

1. Establish a framework for the quality, storage, and use of data
2. Establish an Open Data Platform
3. Establish data management roles and responsibilities
4. Engage City staff in data architecture building
5. Establish procedures that facilitate data sharing and increase the accessibility of data between departments

## **Program Accomplishments**

### **FRAMEWORK FOR THE QUALITY, STORAGE, AND USE OF DATA**

2020 saw the development of an internal data governance policy that defines organizational data access, availability, and management expectations that models quality, storage, and use of data to facilitate data integrity, cross-functional decision-making, and accountability. Additional procedural documents were developed to build upon the effectiveness and efficiency of the Open Data Program: the Open Data Program Approval Process and the Gateway Request Data Verification Self-Audit.

The Open Data Program Approval Process delineates the procedure for departmental asset publication approval requests. The Gateway Request Data Verification Self-Audit addresses data quality and verification measures. This document is designed to aid departments in the identification, inventory, validation, publication suitability, and gateway automation of departmental data. These documents apply to all City departments that collect, enter, publish, or analyze private, internal, and public data utilizing Socrata.

### **OPEN DATA PLATFORM**

City staff continued website remodeling efforts into the 2021 fiscal year. In addition to aesthetic changes, the portal now incorporates processes and technical requirements for publishing datasets to the Open Data Web Platform, including those that exclude confidential and sensitive information. A soft launch was conducted in February of 2021. As an integral component of the Open Data Program, the portal allows newly available and approved internal data to automatically populate the external site for immediate public consumption. This expedites the accessibility of governmental information allowing for the added value of a minimized transparency link. The Open Data Platform was officially launched in March of 2021.

### **DATA MANAGEMENT ROLES AND RESPONSIBILITIES**

The Open Data and Socrata Data Governance Policies establish the open data roles and relationships between the Senior Executive Leadership Team, Open Data Steering Committee, Office of Performance and Innovation, Department Heads, Open Data Coordinator, Department Data Stewards, and IT Data Stewards.

Additional role responsibilities, such as data verification through backup and redundant checks for confidential and sensitive information, were set in both the Open Data Program Approval Process and Gateway Request Data Verification Self-Audit documents. The increased demarcation of roles improves data quality and management, process efficiency, ensures policy and regulatory compliance, and reinforces desired behaviors such as interdepartmental communication.

### **DATA ARCHITECTURE BUILDING**

In 2020, data architecture focused on better understanding data content, building publication pipelines, and policy and programmatic priority alignment. Meetings were held with departmental representatives to determine departmental data classifications, platform mapping, and department program investment. Efforts in 2021 centered on the implementation of gateway automation. The Socrata Gateway is an on-platform solution that allows you to publish, update, and automate datasets directly from key on-premise and cloud-hosted source systems. Integration with the City's internal systems has been completed, and data transfer testing is underway.

### **DATA SHARING, ACCESSIBILITY OF DATA BETWEEN DEPARTMENTS, AND DEPARTMENT COMPLIANCE**

The value of a city's data is contained within the information provided and in the meaning and knowledge added to the data by departmental representatives. To ensure that procedures for data sharing between city departments and other local governments and agencies are efficient and facilitate the optimal deployment and quality of services to citizens, all published City data is made freely available in appropriately varied and practical open formats. Using an open license with no restrictions on use or reuse, published assets are fully accessible to the broadest range of users for varying purposes to encourage permanence and maximum usefulness.

In addition to maintaining accessibility to encourage sharing, training is used to increase compliance, participation, and engagement among internal departments. Training is held regularly on the use of our internal data management systems, as is supplemental training on the asset approval process and gateway use requests. Designated City staff continues to engage City departments to discover and develop publishable data, automate processing tools, publish training documentation, and

establish metrics-driven internal and external performance measurement standards. The policies on Open Data apply to all departments.

### **FURTHERING THE CITY'S POLICY AND PROGRAMMATIC PRIORITIES**

Open Data represents one of the strategic tools that allow municipal employees to improve processes and enhance efficiency through the ability to track changes and better coordinate resources. It can be used to react to and anticipate pressing public issues. The portal has helped provide the public with Henderson-specific COVID-19 data. Publication of these metrics is in keeping with the City's strategic priority of Community Safety and its philosophy of transparency. The congruency of the Open Data Program and the City's policy and programmatic priorities continues to increase with the depth of the Open Data Program.

**APPENDIX A: PUBLICATION TIMELINE**

Inventory ID	Dataset Name	Description	Publishing Department	Target Publishing Quarter	Target Publishing Year	Status	Target Publication Date
BL-1	Active Business Licenses	List of Active business licenses. Updated daily.	Development Services Center	Q3	2021	Published	1/1/2021
COV-1	COVID-19 Cases by Birth Sex in Henderson	COVID-19 Data specific to Henderson.	Office of Performance and Innovation	Q3	2021	Published	1/1/2021
COV-2	COVID-19 Cases by Race/Ethnicity in Henderson	COVID-19 Data specific to Henderson.	Office of Performance and Innovation	Q3	2021	Published	1/1/2021
COV-3	COVID-19 Cases by Age in Henderson	COVID-19 Data specific to Henderson.	Office of Performance and Innovation	Q3	2021	Published	1/1/2021
COV-4	New COVID-19-Related Deaths and 7-Day Moving Average in Henderson, Previous Month	COVID-19 Data specific to Henderson.	Office of Performance and Innovation	Q3	2021	Published	1/1/2021
